

**SHATTERING**

THE WAY WE THINK ABOUT

**MEASUREMENT**

# JD Dillon

Chief Learning Architect

Axonify™

How am I doing?

Is it working?

What should I do next?

L&D must **improve our measurement practices** so we can help individuals and the organization answer 3 important questions?

# Why?

Justify your **investments**.

Keep pace with **change**.

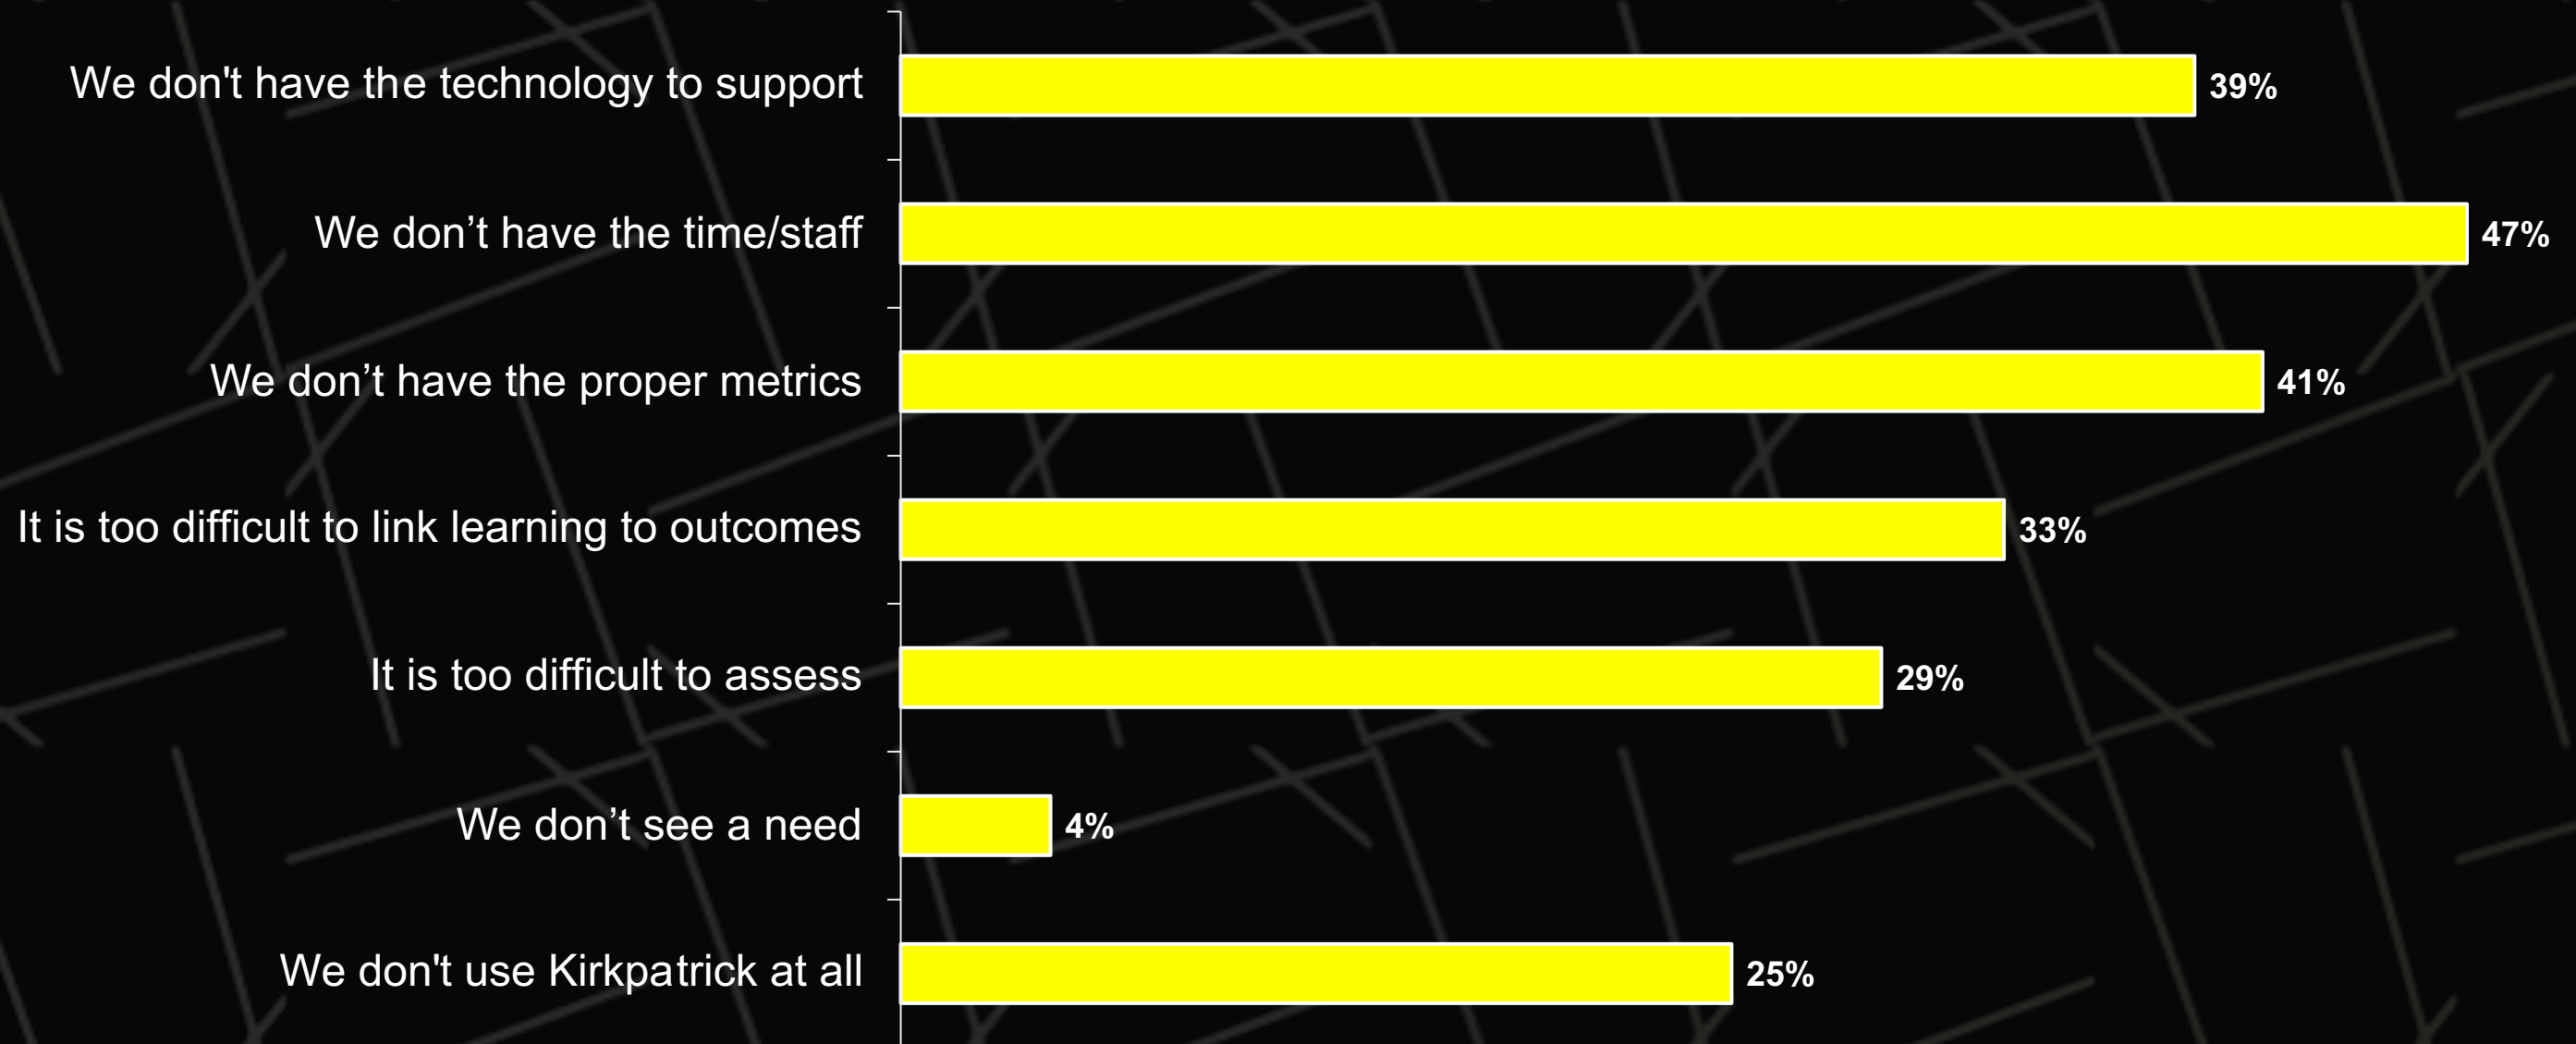

Deliver **proactive** solutions.

**Advance** your practices.

# Traditional models **fail** because ...

More than two-thirds (69%) of companies say that the **inability to measure learning's impact** represents a challenge to achieving critical learning outcomes.

Brandon Hall Group | 2019 Learning Strategy Survey

The measurement gap is **symptomatic** of a larger problem within traditional organizational learning strategy.

## Programmatic

## Systematic

# Let's fix learning measurement in 8 not-so-easy steps

**1**

**Please step away from the familiar but ultimately ineffective measurement models.**

Formative evaluation measures the effectiveness of training during the learning process.

Summative evaluation measures the effectiveness of training at the end of the learning process.

Traditional measurement models were design to support **programmatic training**, not **continuous learning**.

## Level 2: Learning

Learning evaluation is the measurement of the increase in knowledge—before and after.

## Level 1: Reaction

Reaction evaluation is how participant feels about the training or learning experience.

**2**

**Steal measurement strategies from other business functions – such as Marketing (they won't mind).**

L&D must adopt a **continuous measurement approach** to better understand workplace needs.

### Descriptive Analytics

**Track** learning engagement, activity, knowledge, behavior and results.

### Diagnostic Analytics

Spot performance trends and **identify** potential causes.

### Predictive Analytics

Use historical data to **project** likely future outcomes.

### Prescriptive Analytics

Take proactive **action** to adjust support, close gaps and improve future outcomes.

## Adaptation

How can we continuously adapt our support tactics to ensure optimal results?

## Prediction

How are we projected to perform in the future with our key business goals?

## Outcomes

How is learning impacting business results and delivering ROI?

## Activity

How are people engaging with learning opportunities?

## Learning

How is people's knowledge changing over time?

## Behaviors

How are people's behaviors changing on the job?

**3**

**Figure out what data you already have or can access with your existing tools?**

Assess your **existing data practices** by applying the five Vs.

**VELOCITY**

Are we generating, analyzing and applying data fast enough?

**VARIETY**

Are we collecting enough types and forms of data?

**VERACITY**

Is the data we collect accurate and free from bias?

**VOLUME**

Are we collecting the amount of data we need to make reliable observations?

**VALUE**

Does our data help us provide value to the organization?

## Demographic

Who are they?

## Consumption

What have they reviewed?

## Activity

How do they engage?

## Sentiment

What do they say?

## Context

What is happening around them?

Many L&D functions apply a **limited variety and volume** of data that requires considerable effort to collect and analyze, thereby **limiting velocity and value**.

**4**

**Identify the data you'll need to answer our 3 important questions.**

How am I doing?

Improved data practices will help you answer these questions by shifting focus from **descriptive analytics** to more **predictive and prescriptive** applications.

Is it working?

What should I do next?

## Demographic

Who are they?

## Connections

How do they engage with others?

## Consumption

What have they reviewed?

## Knowledge

What do they know?

## Activity

How do they engage?

## Skill

What is their proven capability?

## Sentiment

What do they say?

## Behavior

What are they doing on the job?

## Context

What is happening around them?

## Results

What outcomes are they seeing?

**5**

**Buy lunch for your data people.  
I'm totally serious.  
Buy. Them. Food.**

Engage with **data experts** within other functions to determine how you may be able to leverage their tools and experience.

**6**

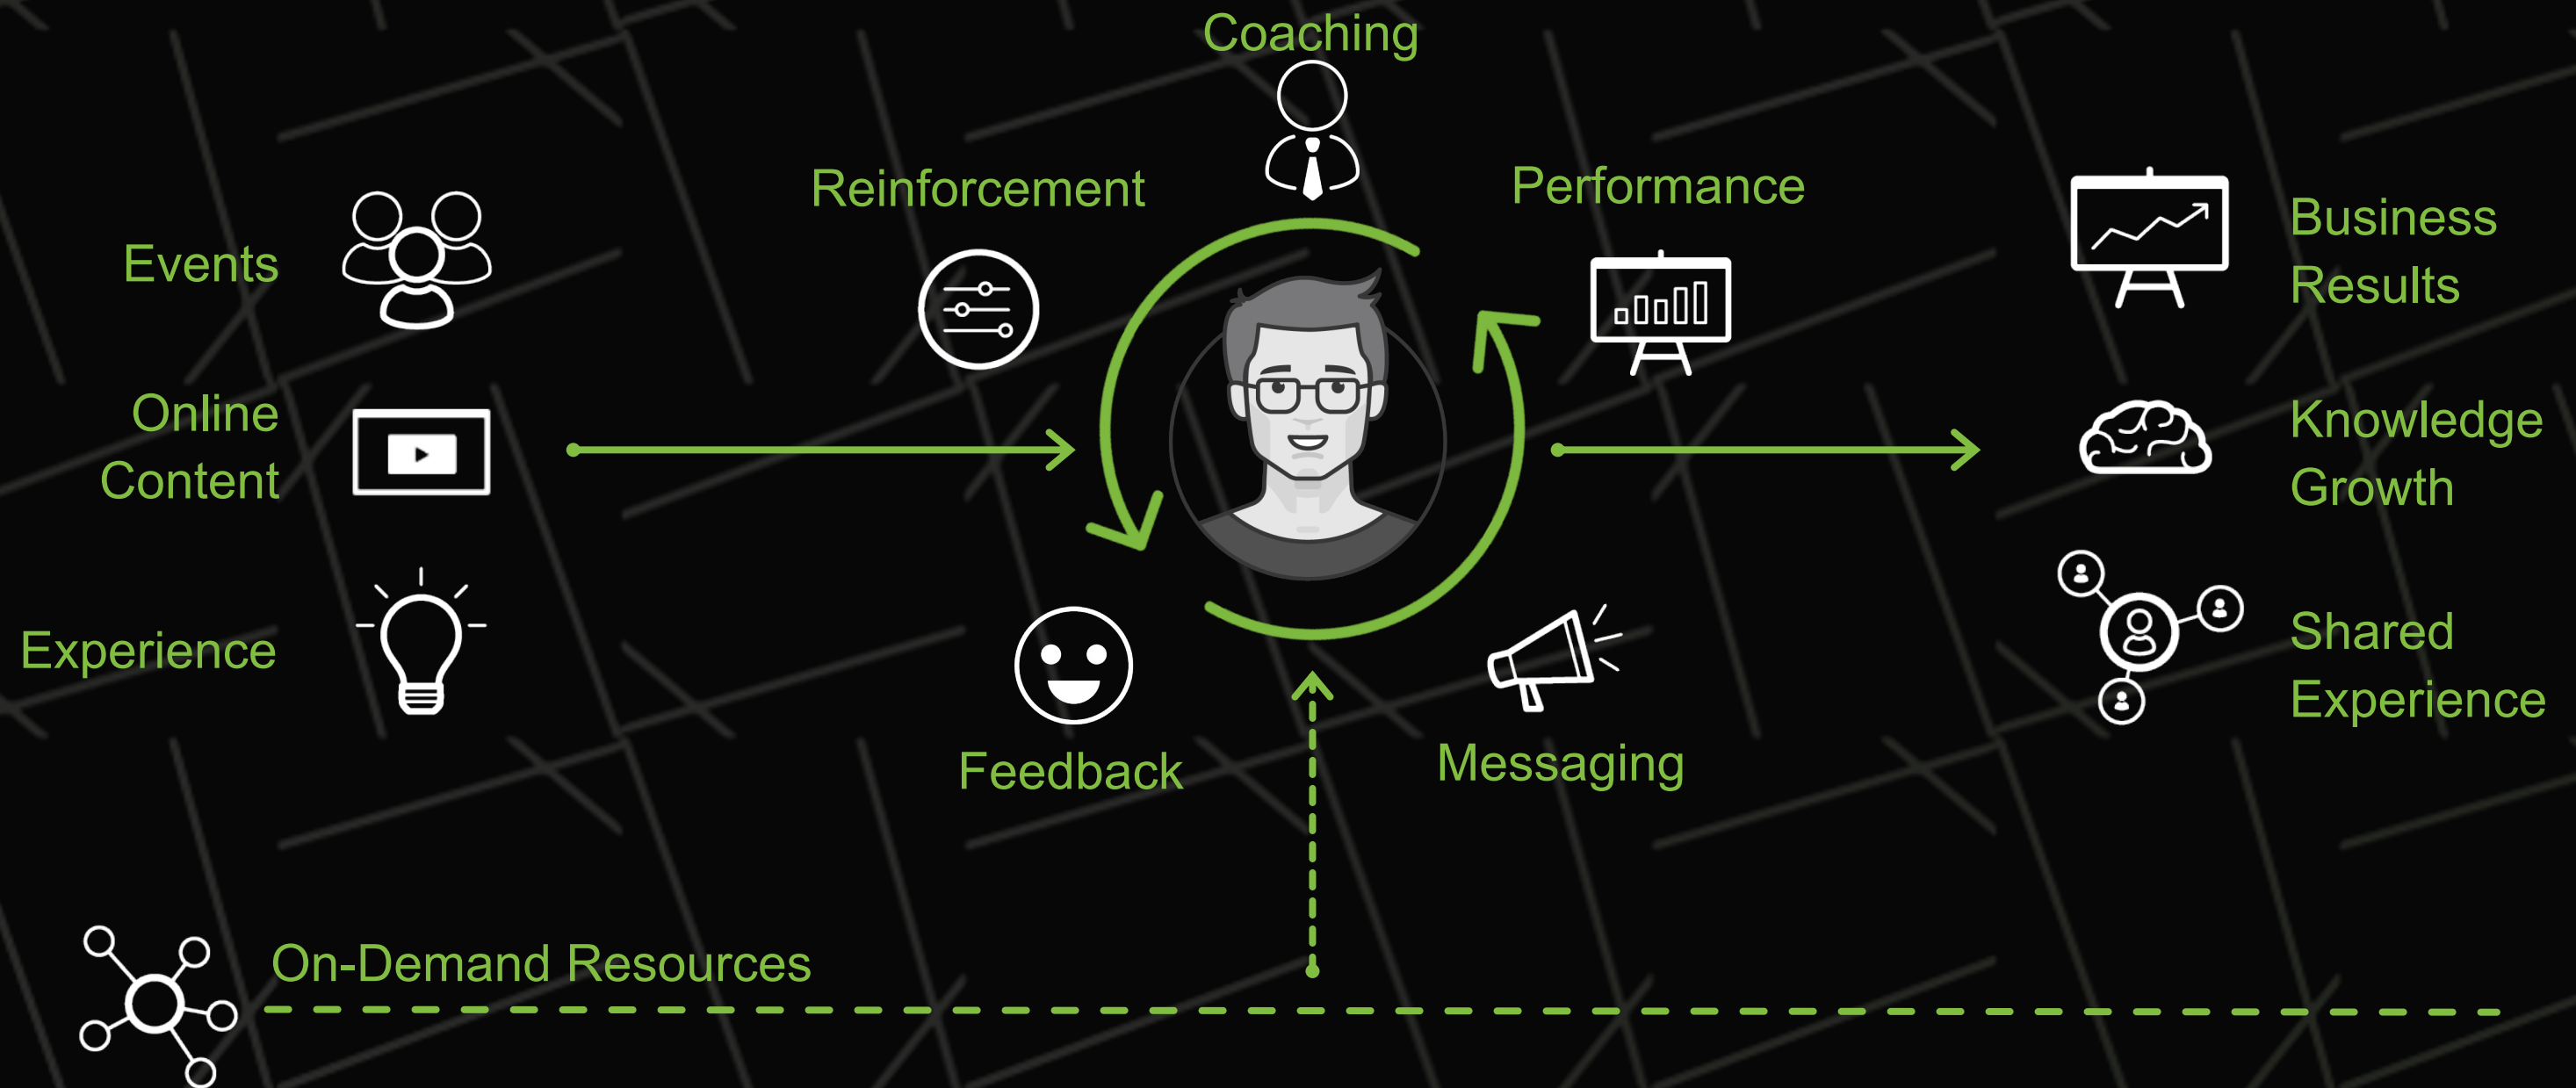

**Adapt your learning strategy to augment data collection and application opportunities.**

Access the **learning experience** to determine how tactics, such as reinforcement, coaching and performance observation, can improve your data capabilities.

Design **targeted solutions** that are easier to measure due to the inclusion of **essential data points**.

Access the **learning experience** to determine how tactics, such as reinforcement, coaching and performance observation, can improve your data capabilities.

**7**

**Put your data to work.**

## Multi-Dimensional Data

- Demographics
- Consumption
- Activity
- Feedback
- Context
- Connections
- Knowledge
- Skill
- Behavior
- Results

## Machine Learning

- AI-Enabled Tech
- ML Models
- Predictive Analytics

## Insights + Recommendations

- Personalization
- Adaptive Learning
- Nudges
- Coaching Prompts
- Impact Attribution
- Gap Analysis
- Skill Mapping

Improved data practices will enable L&D to apply more **advanced, data-rich tactics**.

**8**

**Ask better questions.  
Tell great stories.**

532 people completed the course.  
Everyone got 100% on the test (with unlimited attempts).  
It got a 4.6.

Basic learning data does not help L&D **tell a story** that justifies investment of time, money and resources in workplace learning.

## Quarterly Projects / Attribution

Advanced data practices help you tell **GREAT stories.**

- 1 Let go of legacy models.**
- 2 Borrow from others.**
- 3 Figure out what data you have.**
- 4 Identify the data you'll need.**
- 5 Build relationships with data experts.**
- 6 Adopt continuous, results-focused strategies.**
- 7 Put your data to work.**
- 8 Ask questions. Tell stories.**

**How am I doing?**

**Is it working?**

**What should I do next?**
